

AWAX group companies specialise in processing of plastic using injection moulding. They gained their experience and know-how over many years, manufacturing precision parts for the window industry as well as customs products.

Thanks to the continuous modernisation of the production process and improving the quality of products, as well as to the highly qualified team of specialists, the AWAX GROUP won the trust and appreciation of clients both in Poland and abroad. Expert advice and emphasis on timely delivery makes a strong bond with our clients, and the advanced and fully automated machine park guarantees high quality of products.

glass packers

Glass packers are used for glazing wood, PVC and aluminium windows. Their task is to properly wedge the glass in the window frame. We offer packers in different widths, which will allow to properly glaze both single windows as well as very wide insulating glass units. Packers manufactured by us are made of polypropylene in different colours. Different colours denote different thicknesses of packers.

- 1 mm - white
- 2 mm - blue
- 3 mm - red
- 4 mm - yellow
- 5 mm - green
- 6 mm - black
- 7 mm - brown
- 8 mm - grey

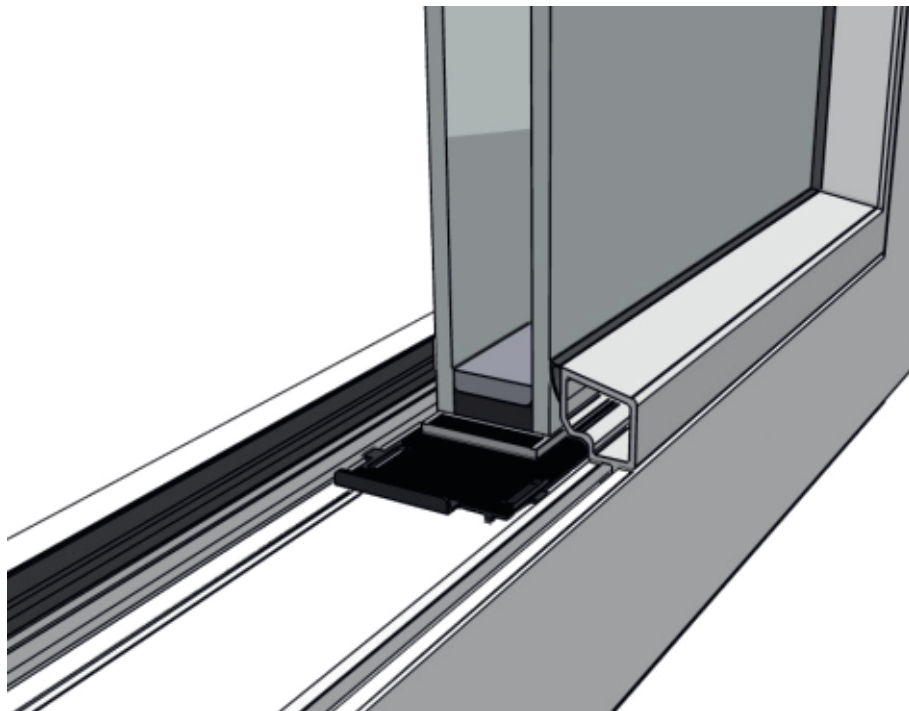

Our packers are from 10 to 56 mm wide and 100 mm long. Widths are marked on the packers.

Glass bridges are used to align the drainage holes in PVC window systems. They have longitudinal ribs to ensure a free flow of water under their surface. They also have special latches that permanently mount them in the window profile. Most of our bridges have side limiters to prevent spacers from sliding out, thus reducing the need for using silicone while glazing. They are made of polypropylene or polystyrene.

glass bridges

FLEX system

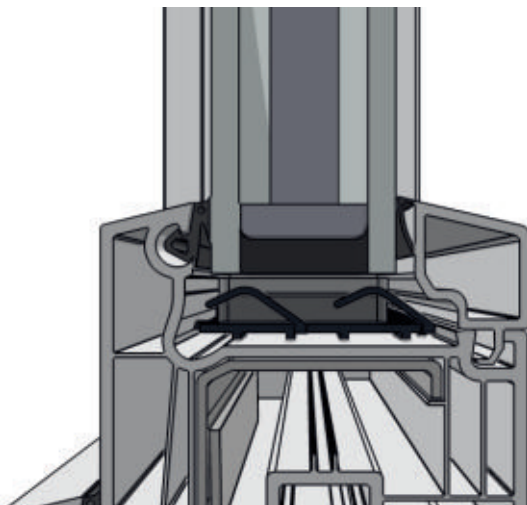

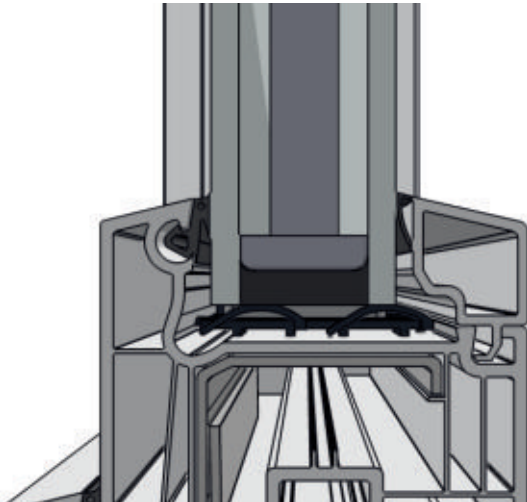

FLEX-type bridges are constructed in such a way that they can always be placed properly in the glazing chamber. Thanks to their specific shape they fit to the width of the chamber, eliminating deviations from the assumed dimensions occurring frequently in profiles.

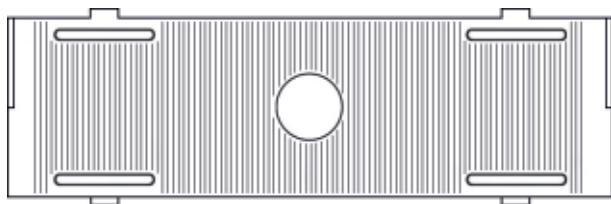

glass bridges

SMART system

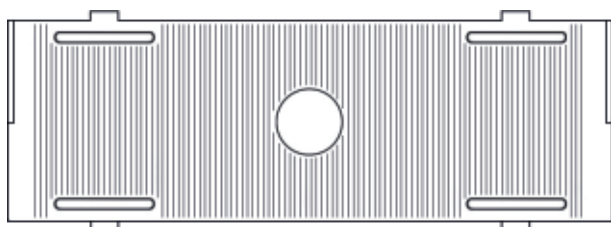

System SMART - Meeting the expectations of customers, we have introduced system bridges, which removed the need for using silicone when glazing when using more glass packers. This line is called "Smart". Bridges of this type, thanks to the use of unique solutions of movable side limiters, enable wedging the pane using both one or many glass packers.

drain hole covers

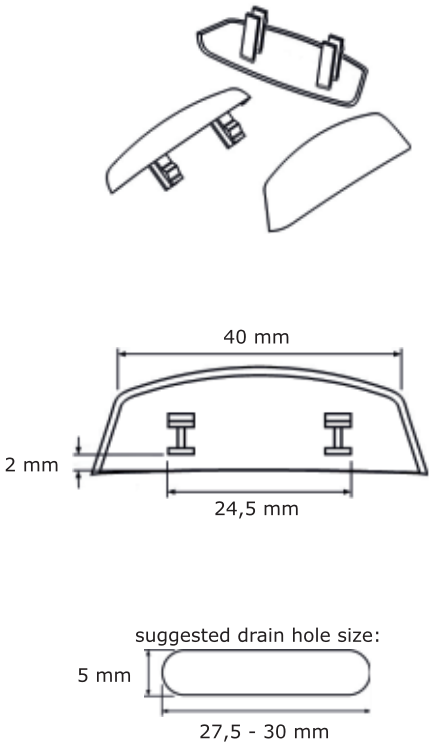

Drain hole covers are used for masking the drain hole in PVC and aluminium windows, improving their look. We make many kinds of covers, differing in both shape and material they are made of.

We produce covers in several colours to match the colours of window veneers. There is also a possibility to make covers in different colours on request.

mullion covers

Floating **mullion cover** is a decorative end piece of the mullion. In addition, it plays an important protective role against the inflow of water into the mullion.

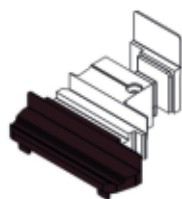

Covers produced by us are made from resistant to UV rays ASA plastic. We offer one- and two-colour covers.

runners

Runners help guide the sash to the correct position in the frame. They also keep it in the correct position, preventing it from falling out. They are used mainly in windows with heavy sashes.

We offer two types of runners - attached to the frame and bolted to the sash.

corner reinforcements

Corner reinforcements are used with PVC profiles. Their use greatly increases the strength of the welds.

Our reinforcements are made of PVC. It is the most suitable material from which they should be produced, because other materials do not guarantee a permanent connection of welded corners. The design of the reinforcement allows for its quick and precise positioning.

glazing shoulders

Glazing shoulders facilitate wedging the insulating glass unit with glass packers.

Shoulders produced by us are made of plastic or wood. Thanks to the use of specially modified, durable plastic, our blades are very durable. At the same time their refined ergonomic shape has a large positive impact on the use of the shoulders.

spacing elements

Spacing elements are used for correcting/ eliminating uneven floor surfaces. They make it easier to assemble and level facades, terraces, doors, windows and other woodwork elements.

Spacers can be used in every thickness combination, and thanks to their specific shape it is easy to use them even for pre-screwed elements.
